

Timing diagram : RRQ_ERROR

Step1 :

Client

Server

Error occurred during read request on server side

①

File not found for reading on the server side when trying to open file

②

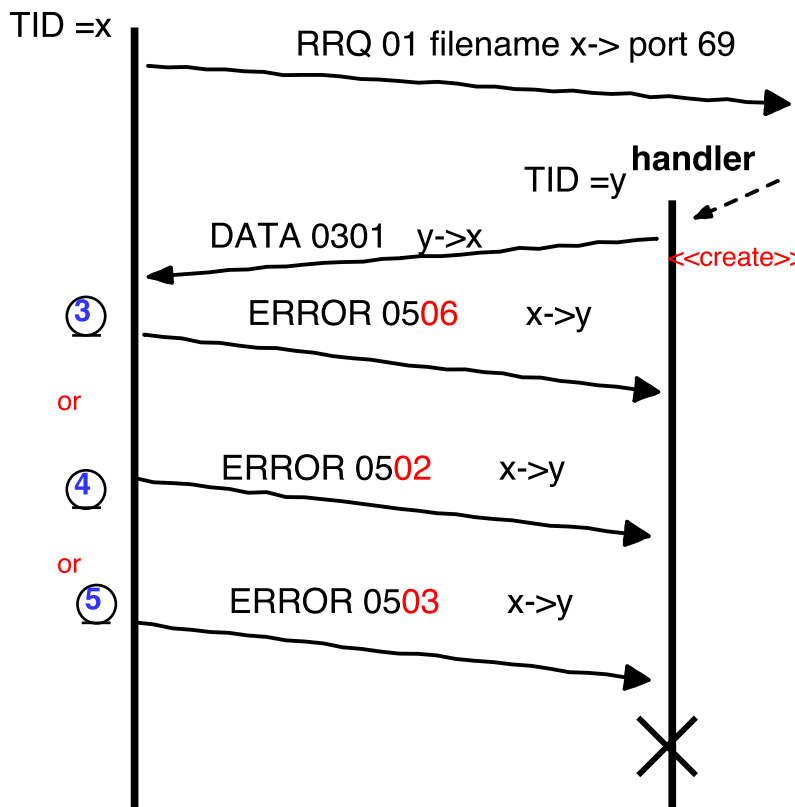

Access violation : file write only mode on server side

if no error on the step 1 :
step 2

Error occurred during read request on client side

Client

Server

③

File already exists in client side when trying to open the file to write into it.

④

Access violation : file read only mode (this error can be sent if we implement/accept the override, otherwise a new file will be created therefore no access violation will be sent)

⑤

Disk Full on client side when trying to create a new file to write into it.

if no error on the step 2 see read transfer error step 3:
