

Timing diagram : WRQ_ERROR

Step1 :

Client

Server

Error occured during write request on server side

①

File already exists in server side when trying to open the file to write into it.

②

Access violation : file read only mode (this error can be sent if we implement/accept the override otherwise a new file will be created therefore no access violation will be sent)

③

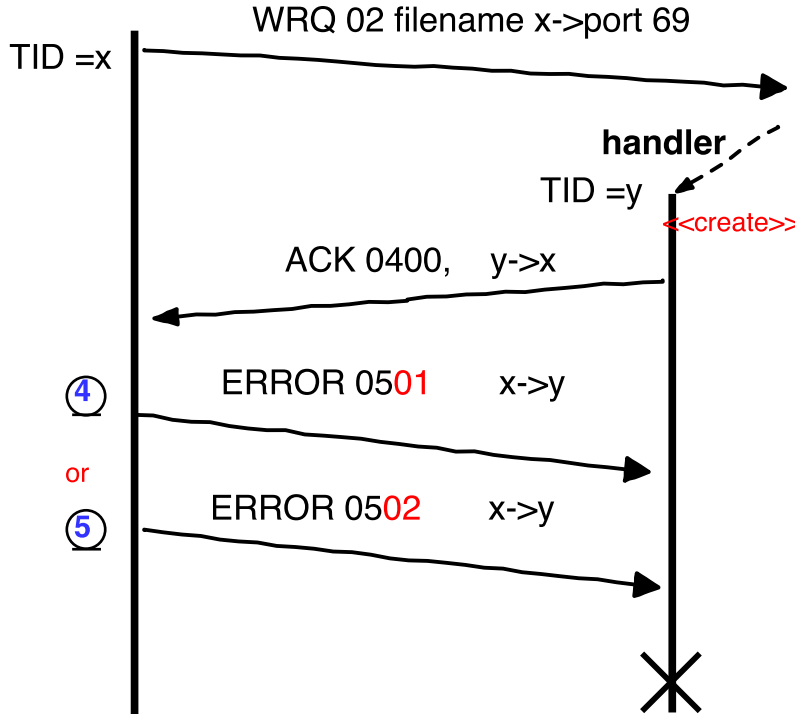

Disk Full on server side when trying to create a new file to write into it.

if no error on the step 1 :
step 2

Client

Server

Error occured during write request on client side

④

File not found for reading on the client side when trying to open file

⑤

Access violation : file write only mode on client side

if no error on the step 2 see read transfer error step 3:
